

Intelligent Waves in partnership with WIRE brings end to end encrypted communications permitting text chat, voice calls, and collaborative video environments to the tactical edge on any device. The Wire communications suite solves common issues with collaborative environments and solves OPSEC & Accountability issues normal alert systems have.

Secure Alert System

• The Problem:

CURRENT LIMITATIONS

Current alert systems have limitations that do not allow commanders full awareness during critical operational phases. Alert systems in place also have an identifiable signature that can inform adversaries of pending military movements potentially putting the operation and personnel at risk.

• The Solution:

WIRE SECURE ALERT

The solution is **Wire Secure Alert** that enables two-way alert and recall securely broadcasting to individuals, allowing administrators to push notifications to anyone registered in pre-defined alert groups.

Wire Advantages:

- Bypasses silent mode ringing on all devices and includes a text message backup feature.
- Non-repudiation of notifications with delivered time, time the notification was viewed enabling Commanders full situational awareness of personnel.
- Single touch points for dissemination of information and preventing spamming of information.
- Ability to send files of any type that can be limited by system administrators improving situational awareness in a secure end-to-end encrypted collaboration environment.
- Wire can be deployed in the cloud as a SaaS (Software as a Service) offering or deployed on premise permitting full control of mission data.
